Practice maths at your own level

AI FOR GOOD – Heckaton 1
Jallie & Nina

The Problem & SDG

Maths considered a hard subject for most secondary-schoolers. According to OECD & PISA scores fell after COVID.

SDG 4 - Quality Education was looked at when mapping out the problem. Every student should have access to the same tools.

4 QUALITY EDUCATION

The Solution

A maths quizzing website that lets high-school students practice at their own level and see exactly where they stand.

- 3 levels: Beginner, Intermediate, Advanced
- Multiple choice and open questions
- Shows your score right away
- Shows the right answer when you get something wrong
- Bolt.new (AI) generated the quiz questions and the logic that checks your answers

Target audience

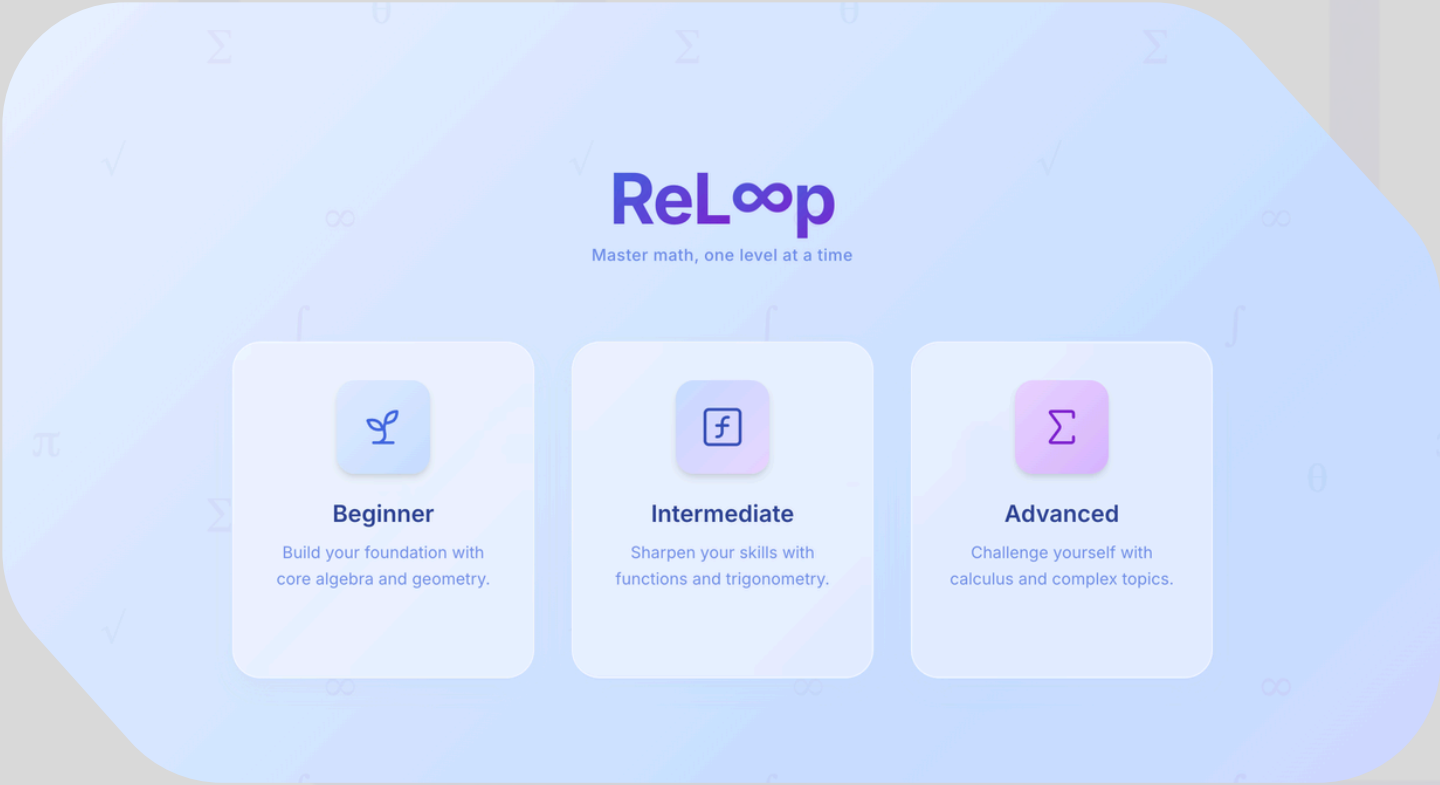

Who is it for?

- High-school students who want to check their level or practice independently
- Anyone wanting a quick refresher or self-challenge
- Not for: younger children needing step-by-step teaching, or non-English speakers

Live Demo Walkthrough

2. Answer a mix of questions

1. Pick a difficulty level

3. See your score and review what you got wrong

What We Learned

Making a plan

Learned what points we need to take into account when we start making a plan for a bigger prompt. Helps with having more control over the tool

Effective usage of tokens

Because of the plans, the thought process behind the usage of tokens is more frugal and mapped out. Thus making the usage of it more effective.

Connecting an idea to an SDG

Thought more indepth about how this solution would impact it's userbase and how this is connected to the SDG.
